International SIP Trunking

Reliable, cost-effective and highly scalable international voice services

Our International SIP Trunking service offers an immediate alternative to expensive and inflexible ISDN infrastructures. Adopting a single IP network for voice and data services is the only sensible way forward. But not every organization can make an immediate and total transition, and for that reason we also offer SIP-ISDN gateways.
This solution offer delivers reliable, cost-effective and highly scalable international voice services.

- Simple and attractive price proposition
- Extensive geographical coverage
- Rich features and part of complete voice portfolio
- Step-by-step managed migration
- Scalable and flexible
- Support for leading and legacy PBX systems
- Advanced self-service customer portal
- Modular and versatile reporting tools

Efficiency now

Many companies still rely on largely uncontrolled and often locally contracted international voice services. This is costly and all too often results in a lack of consistency with regard to performance, support and pricing.

If you already use a managed international data network, you know the benefits of using a single network infrastructure. You can now reap the same reward for voice services, simply by using the same IP network for both voice and data. It is more efficient, and it saves money.

The KPN International solution

Our International SIP Trunking solution delivers high-quality, low-cost international voice services, by carrying voice over IP networks. Business demand for international voice services is often dynamic, and our solution delivers the flexibility you require, allowing you to scale up or down at any time. Our pricing structure is completely transparent, and our service is end-to-end, with fully managed transition ensuring smooth and trouble-free adoption.

Licenses instead of lines

Replacing existing ISDN or POTS-based infrastructure with SIP trunks allows direct connection to an IP-PBX. This instantly overcomes the “fixed capacity” challenge of traditional telephony services carried, for example, over ISDN 30. With International SIP Trunking you simply order the licenses needed to meet the anticipated number of concurrent calls needed.

This decreases the cost of paying for excess capacity, while allowing for additional licenses to be ordered or revoked instantly, as needed.

The Dutch Touch Worldwide

Leverage your data network and PBX platform

International SIP Trunking is a VoIP solution based on the SIP protocol. We support all leading PBX platforms, enabling you to leverage your existing data network by routing calls from your PBX through a SIP Trunk to the KPN International Voice Gateway. Once connected, you can decommission ISDN infrastructure. KPN International offers a managed conversion service for locations without an IP-ready PBX.

Smooth transition and full features

International SIP Trunking features:

- Number porting
- CLIP/CLIR
- Geographical coverage in 13 countries
- Connections via SIP
- Codecs : G711 and G.729
- Fax support
- Over 25 certified PBX models

Flexible reporting and cost allocation

Different companies have different reporting preferences. KPN International offers versatile reporting modules. Choose from basic cost overviews and standard cost reports to in-depth cost allocation, allowing near-real-time insight into voice expenditure.

International Voice Services

International SIP Trunking is part of our International Voice Services portfolio. The portfolio is being continuously enhanced as technology and international business practices evolve. Instead of offering separate IP Telephony solutions, KPN International integrates the International Voice Services to your needs.

Relationships count

Your International SIP Trunking service will be managed by a dedicated Project Manager. This means a Single Point of Contact during transition and ongoing development. This commitment to personal continuity ensures that our team understands your business and your requirements from the start.

KPN International is a fully-integrated business unit of KPN – the number-one Dutch ICT provider and one of Europe's leading telecommunication services provider. The KPN International portfolio delivers a comprehensive range of high-class data, communication and IP services. Thanks to our intelligent network, bandwidth solutions and future-proof products, we serve over 700 corporate customers, service providers and carriers with services that span more than 180 countries.
